

USE OF AUTOMATIC BEEHIVE IN HONEY PRODUCING APIARIES

A Hungarian invention brings revolutionary changes in beekeeping. Experiences have undoubtedly proved that using the rotating broodframe beehive in honey production season:

- ☑ Reduces the number of mites to minimal without the use of chemicals, and prevents the colony from swarming.
- ☑ Enables production of chemical free honey products (chemical free nutrition = healthier life).

- ☑ Results in the development of stronger colonies with larger population.
- ☑ Reduces the risk of secondary diseases (chalkbrood, etc.) to minimal.
- ☑ Enables beekeeping to become a modern agricultural sector, the beekeeper's investment will pay back in short time.

Kónya rotating broodframe beehive begins a new age in the history of beekeeping.

You can learn more about the rotating broodframe beehive at the AniVet booth no. 2N60. Visit us, and watch the film about the new technology!
