Abstract (Resumen)

The vegetation, climate and sanitary characteristics of Mendoza (Argentina) distinguish the province as an ideal location for the production of nuclei, packages and queens. A healthy amount of producers oriented to queen production for both domestic and international markets is found in this region. Even though general features are shared throughout the region, it offers some unique characteristics with regard to the work of each queen producer due to the subtle diversity of the province's ecosystems and other human factors. **A descriptive study of the primary characteristics of a Mendoza queen producer's bee farm (case study)** may later aid a comparative study to profile the characteristics of this particular area of bee farming in the region. This study analyzes a bee farm **located in Vista Flores (Tunuyán, Mendoza, Argentina)**. The work was performed by both a Breeders' Association technician and the beekeeper responsible for the bee farm. The methodology used comprised an interview based upon a standardized questionnaire together with information obtained in at least two visits to the bee farm over more than one season. This information was organized in diagrams and graphics that allow an easy and intuitive way of recognizing the main characteristics of queen production at the bee farm studied.

Identification and location (Identificación y localización)

Apícola Vista Flores

Inaugurated in Inaugurada en	1998
Location Ubicación	Vista Flores, Tunuyán, Mendoza, Argentina.
Distance to Mendoza city Distancia a la ciudad de Mendoza	88 Km.
Distance to Buenos Aires city Distancia a la ciudad de Buenos Aires	999 Km.
