## ABOUT SUPPOSITORIES

One of the most effective and progressive forms for correct dosage is the application of suppositories.

Suppositories (candles) can be rectal, vaginal and rectal-vaginal.

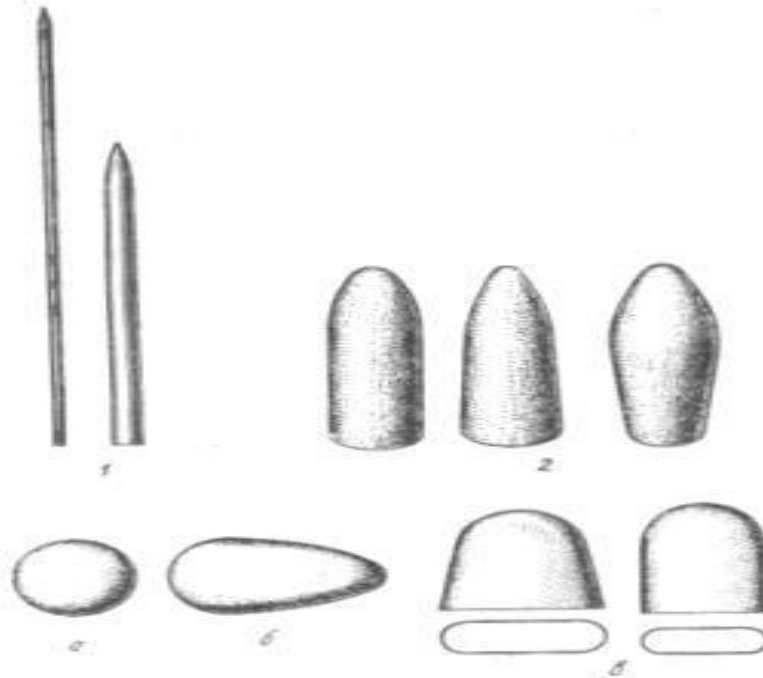

Рис. 29. Форма суппозиторияв.  
а, б, в — вагинальные суппозитории;  
1 — палочки, 2 — ректальные.

## THE ADVANTAGES OF SUPPOSITORIES

- 1) Biologically active substances enter directly into general blood circulation (bypassing the stomach and liver) and can be absorbed at a high rate, which minimizes the risk of allergies and side effects**
- 2) The use of suppositories is simple, safe and painless**
- 3) The rectal-vaginal method of using suppositories combines the positive qualities of oral and injection methods of application of biologically active substances in a medical treatments**
- 4) In some cases (trauma, age, etc.), suppositories may become the only one possible method treatment**

## SUPPOSITORIES WITH BEE PROPOLIS
